

Russell Dudek

Interview Thesis Brief — Director, AI Operations

Pittsburgh, Pennsylvania · 412.287.8640 · russelldudek@gmail.com · linkedin.com/in/russelldudek
<https://russelldudek.github.io/Ontra/>

ROLE OBJECTIVE

Turn fragmented internal AI demand into a governed portfolio that produces adopted workflows, stronger employee capability, coherent tool decisions, and measurable business value.

COMPANY MOMENT

Ontra positions itself as the AI platform for private markets, with a mission to transform unstructured information into insight, action, and automation. The role reports to the VP of Business Operations & Strategy and combines roadmap, implementation, enablement, community, governance, and tool-stack ownership.

CANDIDATE THESIS

Turn every AI experiment into operating precedent. Each successful intervention should leave behind a clearer workflow, explicit human authority, practical tool and data boundaries, stronger local capability, and evidence for scale, repair, local containment, or retirement.

AI PRECEDENT BENCH

Review one departmental case through work, value, authority, boundary, adoption, evidence, ownership, and disposition. The artifact integrates responsibilities that are often split across strategy, transformation, learning, and governance.

PROOF MAP

Vape-Jet: current AI-first operations execution. DudeWorth: AI opportunity and agentic workflow patterns. Amazon: launch, cadence, standard work, Lean/Gemba. Compunetics: integrated technical, quality, and high-reliability systems.

EXECUTIVE QUESTIONS

1. Where is AI demand strongest and least visible? 2. Which workflows should be redesigned rather than merely accelerated? 3. What would make the Community of Practice useful? 4. Which tool, data, security, procurement, or legal decisions create the most ambiguity? 5. What must be true after six months for the capability to be credible?

SOURCES

Ontra Director, AI Operations posting; Ontra About, Careers, Leadership, Products and website pages; verified candidate evidence. Internal workflow examples are illustrative hypotheses for discovery.
