

HOW I WOULD CONTRIBUTE

Read the work.

Earn the right to standardize.

The plan installs a useful central mechanism without assuming access to undisclosed Ontra workflows. Each phase produces evidence, capability, and explicit decisions - not a ceremonial transformation program.

01

Tactical empathy first

Understand what current work protects before prescribing change.

02

Value before scale

Start with workflow outcomes, not a catalog of tools.

03

Authority stays visible

Named humans retain interpretation, commitments, and exceptions.

04

Learning compounds

Every case records what should transfer and what must remain local.

01

DAYS 1-30

Read the work

- Interview department leaders, workflow owners, embedded practitioners, Engineering, Security, Procurement, Legal, Finance, and People partners.
- Inventory active automations, approved tools, shadow use, recurring training needs, vendor commitments, and escalation paths.
- Observe representative work directly and separate workflow problems from tool requests.
- Define qualitative intake and evidence categories without inventing a maturity score.

PHASE OUTPUT

Current-state opportunity and boundary map, stakeholder topology, tool inventory, and baseline measurement plan.

02

DAYS 31-60

Establish useful boundaries

- Launch an intake capturing work, value, owner, authority, boundary, adoption, and evidence.
- Define intervention patterns and escalation rules with accountable partners.
- Curate practical training by job context and establish advocate expectations.
- Launch a working Community of Practice centered on active cases.

PHASE OUTPUT

AI Operations charter, review cadence, first training pathways, and initial bounded capability portfolio.

03
DAYS 61-90

Prove working capability cases

- Co-design workflow changes with department owners and users.
- Test prompts, automations, integrations, review steps, and exception paths inside approved boundaries.
- Capture outcome, effort, quality, trust, adoption, and user-feedback evidence.
- Document reusable core, legitimate local variation, unresolved risk, and the next decision.
- Update guidance and training from observed behavior rather than theory.

PHASE OUTPUT

Evidence-backed capability patterns, user feedback, intervention decisions, and updated enablement.

04
DAYS 91-120

Institutionalize learning

- Publish a searchable capability-pattern library and reusable decision guidance.
- Establish an executive scorecard and portfolio review cadence.
- Strengthen advocates with role clarity, examples, coaching, and feedback loops.
- Identify tool/vendor consolidation, integration, security, or lifecycle decisions.
- Present the next roadmap based on evidence, strategic importance, and change capacity.

PHASE OUTPUT

Capability-pattern library, scorecard, advocate network, tool/vendor recommendations, and next roadmap.

BALANCED SCORECARD

BUSINESS OUTCOME
Effort, cycle time, completeness, rework, or decision latency.
ADOPTION
Retained use, owner participation, training usefulness, and advocate activity.
TRUST & QUALITY
Exceptions, corrections, review confidence, and boundary adherence.
ECONOMICS
Maintenance cost, tool overlap, support burden, and time-to-value.
LEARNING SPEED
Time from signal to bounded proof and explicit disposition.
REUSE
Patterns adapted by a second team without hiding legitimate variation.

OPERATING CADENCE

Weekly: active-case review and blocker resolution.
Monthly: portfolio, adoption, tool/vendor, and evidence review.
Quarterly: readiness capability gaps, and executive decisions.
